

Remarks for model A in BPMN:

Regarding the indication of human and automatic tasks I chose to represent them by the task type option. I think it is a nice way of easily showing the viewer of the model how and by whom a certain task is performed.

Regarding XOR gateway “What is the result”: This gateway fulfills two requirements of the tasks, as it for once introduces the loop (back to “Book appointment”) and functions as a decision allowing, apart from the loop, two different paths that can be pursued.

Last, I’d like to discuss the necessity of the task “Watch funny cat videos” as it can be scrutinized. I choose to model the task because it is clearly stated in the assignment how the waiting time is spent.
